Visual checks (manual)

These were reviewed by rendering contact sheets during production: - Logo family on light and dark grounds, roundel framing, minimum-size renders. - Icon grid (line and solid) at 2.5× and 1×. - All 14 backgrounds at 16:9; the portrait and A4 variants were spot-checked. - Motion keyframes for A–E: the frames sampled at each phase match the storyboard, and the final frames are stable. - Every DOCX → PDF conversion (LibreOffice), checked page by page: cover full-bleed, footer page numbers right-aligned, no text collisions. - PPTX → PDF, all 21 slides: no overflow after the timeline fix. - Social templates in every format: the NTW square and explore-business square layouts were corrected. - Guidelines PDF, all 36 pages: anatomy labels and the misuse examples were corrected. - Lottie: frames rendered in lottie-web (`lottie_test/`).

Defects corrected during QA

- Supplied reversed logo: the first “i” dot was 1 unit off-centre. Corrected in the kit’s reversed masters.
- Roundel crop cut the monolith. Reframed the window (centre 93/7.5, r 32).
- Ridges in the backgrounds were too high-frequency. Reduced the harmonics.
- Investment background had a hard-edged block. Redesigned with sun rings.
- Report cover title collided with the sun. Made a dedicated cover background.
- Footer page numbers inherited Word’s default tab stops. Reset the footer style.
- Proposal numbering continued between lists. Switched to explicit numbering.
- Seal bottom text read upside down. Set the lower arc to read upright.

- Sonic logo had a click where a bell note was cut. Added a 30 ms release taper to every voice.
- Motion D logo was missing its wordmark (closed mask). Opened the mask.
- ffmpeg fade parameter format failed. Fixed the render script.
